

# 1st Annual Bangor Grand Easter Egg Hunt

By Michael Ortoski

BANGOR - Bangor Borough had its 1st Annual Grand Easter Egg Hunt this past weekend with over a 1000 candy fillid eggs to be found at Bangor Memorial Park.

The Easter bunny was there with his friend 'Barbie' for photo opps. It was chilly with the wind blowing but the sun made it bearable and nobody turned down the FREE ice cream provided by Fidelity Bank's Ice Cream Truck.

**St. Luke's**

system works in harmony with the patient's anatomy to deliver stability and motion; it has been used in more 2 two million individuals worldwide since 2011. "Patient care is our top priority at St. Luke's, and the ability to offer reproducible precision in knee replacement has helped improve the quality of life for our patients and allowed them to return to the passions they love," said St. Luke's orthopedic surgeon Adam Sadler, DO, who serves as the network director of the orthopedic robotic program. "This robotic-assisted solution has helped us 'push the envelope' in this exacting procedure to increase the life of the implant, reduce pain, and accelerate rehabilitation."

This technology is transformational as the VELYS system has helped St. Luke's orthopedic surgeons further enhance the implant process, according to St. Luke's orthopedic surgeon Patrick Brogle, MD. Dr. Brogle used the VELYS robotic-assisted technology to remove Diane Childs' arthritic knee and replace it with a metal and plastic joint, which took less than an hour. Childs, a retired nurse, had the procedure at St. Luke's Orthopedic

Hospital at the St. Luke's West End Campus in Allentown. "The technology allows for degrees of precision not possible with traditional manual instrumentation," said Dr. Brogle. "I feel it contributes to an enhanced recovery and outcome."
