

## Fighting Cancer, Ensuring a Legacy

By Sam Kennedy

BETHLEHM - Every three minutes, one person in the U.S. is diagnosed with a blood cancer, according to the National Foundation for Cancer Research. And every nine minutes, someone in the U.S. dies from it.

Decades of research have resulted in significantly improved outcomes for those diagnosed with cancers that affect the blood, bone marrow and lymphatic systems. These cancers account for roughly 10% of all diagnosed cancers in this country, which translates into 1.3 million people in the country who are either living with a blood cancer or are in remission today.

One of those individuals was Brent P. Evans, a well-known East Coast snowboarder who was diagnosed with a rare type of stage IV non-Hodgkin's lymphoma in 2010. While battling the disease, he started a grassroots organization called Carve 4 Cancer. Its inaugural event to raise funds and awareness about blood cancers was a snowboard and ski event that was held in the Pocono Mountains.

The relationship between St. Luke's University Health Network and the non-profit began when leaders of Carve 4 Cancer reached out to the Network to discuss ways to collaborate on the winter fundraiser. "It says a lot about St. Luke's that they agreed to get behind us from day one," said Josh Frank, who was a close friend of Evans and who now volunteers (along with other staff) with the Carve 4 Cancer organization. "St. Luke's didn't know us and we didn't know them, but we took a chance at working together," said Frank. "And we've been collaborating ever since."

Brent was in remission for several years, but succumbed to the disease in 2017. Still, his passion for life and his desire to help others lives on in the Carve 4 Cancer non-profit he started, as well as the Live Like Brent Foundation (LLBF) that was established by his friends in his memory, which seeks to alleviate some of the financial burden cancer treatment imposes on patients.

Among those who continue to benefit from this group's fundraising efforts are those battling blood cancer at St. Luke's Cancer Center. A fund was established in support of blood cancer patients in 2018 after Carve 4 Cancer donated \$10,000 to St. Luke's Cancer Center. Since then, the organization has donated nearly \$65,000 to the fund and has helped numerous cancer patients at various St. Luke's locations in Pennsylvania and New Jersey. Last year, St. Luke's treated more than 4,000 cancer patients. Many of those patients struggle financially and would not otherwise be able to meet the cost of their chemotherapy, radiation, or other treatments and medications.

"The Carve 4 Cancer organization," she added, "has always been tremendously supportive of those fighting this form of cancer, but this year, they have really gone over and above with their level of support. It's been a huge help to St. Luke's in caring for its blood cancer patients."

Frank is certain his friend Brent would approve of how these funds are being used.

"Part of what we were trying to accomplish was to find ways to help people with blood cancer fill the financial gap while they are battling their disease," Frank said. "I know everyone who is a part of the Carve 4 Cancer organization is grateful for the opportunity to carry on Brent's legacy. With every decision we make, we ask, 'What would Brent do?' Losing him was one of the most difficult things any of us have experienced. But we use that pain and loss to make sure no one forgets about him and to continue the work we

## Wild Turkey Count Underway

### Game Commission Seeks Help Counting Wild Turkeys

By Senator Scavello

PEN ARGYL - The Pennsylvania Game Commission is again seeking input from the public in surveying wild turkeys this summer. The Pennsylvania Wild Turkey Sighting Survey is open through Aug. 31.

Participation is important for turkey population management. Survey data allow the agency to determine total wild turkey productivity and compare long-term reproductive success within Pennsylvania and across states, as this is a standard methodology used across the country. Data also are used in the turkey population model to track population trends.

Turkey sightings can be reported through the Game Commission's website. The mobile app is no longer available.
